Câu hỏi **1**

Đúng

Đạt điểm 1,00 trên 1,00

In the coordinate plane, we have class Point to store a point with it's x-y coordinate.

Your task in this exercise is to implement functions marked with /* * STUDENT ANSWER */.

Note: For exercises in Week 1, we have #include <bits/stdc++.h> and using namespace std;

For example:

Test	Result
Point A(2, 3); cout << A.getX() << " " << A.getY();	2 3
Point A(2, 3); Point B(1, 1); cout << pow(A.distanceToPoint(B), 2);	5

Answer: (penalty regime: 0 %)

Reset answer

```cpp
1  class Point
2  {
3  private:
4      double x, y;
5
6  public:
7      Point()
8      {
9          /*
10          * STUDENT ANSWER
11          * TODO: set zero x-y coordinate
12          */
13          this->x = 0;
14          this->y = 0;
15      }
16
17      Point(double x, double y)
18      {
19          /*
20          * STUDENT ANSWER
21          */
22          this->x = x;
23          this->y = y;
24      }
25
26      void setX(double x)
27      {
28          /*
29          * STUDENT ANSWER
30          */
31          this->x = x;
32      }
33
34      void setY(double y)
35      {
36          /*
37          * STUDENT ANSWER
38          */
39          this->y = y;
40      }
41
42      double getX() const
43      {
44          /*
```

```
45            * STUDENT ANSWER
46            */
47           return x;
48        }
49
50       double getY() const
51 ▾     {
52 ▾         /*
```

	Test	Expected	Got	
✓	Point A(2, 3); cout << A.getX() << " " << A.getY();	2 3	2 3	✓
✓	Point A(2, 3); Point B(1, 1); cout << pow(A.distanceToPoint(B), 2);	5	5	✓

Câu hỏi 2

Đúng

Đạt điểm 1,00 trên 1,00

In the coordinate plane, a circle is defined by center and radius.

Your task in this exercise is to implement functions marked with /* * STUDENT ANSWER */.

Note: you can use implemented class Point in *previous question*

For example:

Test	Result
Circle A; A.printCircle();	Center: {0.00, 0.00} and Radius 0.00

Answer: (penalty regime: 0 %)

Reset answer

```cpp
class Point
{
private:
    double x, y;

public:
    Point()
    {
        /*
         * STUDENT ANSWER
         * TODO: set zero x-y coordinate
         */
        this->x = 0;
        this->y = 0;
    }

    Point(double x, double y)
    {
        /*
         * STUDENT ANSWER
         */
        this->x = x;
        this->y = y;
    }

    void setX(double x)
    {
        /*
         * STUDENT ANSWER
         */
        this->x = x;
    }

    void setY(double y)
    {
        /*
         * STUDENT ANSWER
         */
        this->y = y;
    }

    double getX() const
    {
        /*
         * STUDENT ANSWER
         */
        return x;
```

```
48     }
49
50     double getY() const
51     {
52
```

	Test	Expected	Got	
✓	Circle A; A.printCircle();	Center: {0.00, 0.00} and Radius 0.00	Center: {0.00, 0.00} and Radius 0.00	✓

Câu hỏi **3**

Đúng

Đạt điểm 1,00 trên 1,00

In a game, we have class `Character` to store characters' data.
The class `Character` is declared as below:

```
class Character {
protected:
    int hp;
    int x;
    int y;
public:
    // Constructor: set the values of x and y and hp to 0
    Character();

    // Constructor: set the values of hp, x and y to each parameter
    Character(int hp, int x, int y);

    // Set and get hp
    int getHp();
    void setHp(int hp);

    // Set and get x
    int getX();
    void setX(int x);

    // Set and get y
    int getY();
    void setY(int y);

    // Get Manhattan distance to other character
    int getManhattanDistTo(Character* other);
};
```

Your task is to define the constructors and the methods of the class.

Note:

In this task, `iostream` library has been included, and `namespace std` is being used. No other libraries are allowed.

For example:

Test	Result
`Character ch1(100, 3, 6);` `cout << ch1.getHp() << " " << ch1.getX() << " " << ch1.getY();`	100 3 6

Answer: (penalty regime: 0 %)

Reset answer

```
 1  Character::Character() {
 2      // STUDENT ANSWER
 3      this->hp = 0;
 4      this->x = 0;
 5      this->y = 0;
 6  }
 7
 8  Character::Character(int hp, int x, int y) {
 9      // STUDENT ANSWER
10      this->hp = hp;
11      this->x = x;
12      this->y = y;
13  }
14
```

```
14
15   int Character::getHp() {
16       // STUDENT ANSWER
17       return this->hp;
18   }
19
20   void Character::setHp(int hp) {
21       // STUDENT ANSWER
22       this->hp = hp;
23   }
24
25   int Character::getX() {
26       // STUDENT ANSWER
27       return this->x;
28   }
29
30   void Character::setX(int x) {
31       // STUDENT ANSWER
32       this->x = x;
33   }
34
35   int Character::getY() {
36       // STUDENT ANSWER
37       return this->y;
38   }
39
40   void Character::setY(int y) {
41       // STUDENT ANSWER
42       this->y = y;
43   }
44
45   int Character::getManhattanDistTo(Character *other)
46   {
47       // STUDENT ANSWER
48       return abs(other->x - this->x) + abs(other->y - this->y);
49   }
```

	Test	Expected	Got	
✓	`Character ch1(100, 3, 6);` `cout << ch1.getHp() << " " << ch1.getX() << " " << ch1.getY();`	100 3 6	100 3 6	✓
✓	`Character ch2;` `cout << ch2.getHp() << " " << ch2.getX() << " " << ch2.getY();`	0 0 0	0 0 0	✓

Hoang is a K19 student studying at Bach Khoa University. He plans to write a book management software for the library. In the class design, Hoang has designed the class Book as follows:

```cpp
class Book
{
private:
    char* title;
    char* authors;
    int publishingYear;
public:
    // some method
}
```

Your task in this exercise is to implement functions marked with /* * STUDENT ANSWER */.

Note: For exercises in Week 2, we have #include <bits/stdc++.h> and using namespace std;

For example:

Test	Result
Book book1("Giai tich 1","Nguyen Dinh Huy",2000); book1.printBook();	Giai tich 1 Nguyen Dinh Huy 2000
Book book1("Giai tich 1","Nguyen Dinh Huy",2000); Book book2 = book1; book2.printBook();	Giai tich 1 Nguyen Dinh Huy 2000

Answer: (penalty regime: 0 %)

Reset answer

```cpp
class Book
{
private:
    char *title;
    char *authors;
    int publishingYear;

public:
    Book()
    {
        /*
         * STUDENT ANSWER
         * TODO: set zero publishingYear and null pointer
         */
        this->title = nullptr;
        this->authors = nullptr;
        this->publishingYear = 0;

    }

    Book(const char *title, const char *authors, int publishingYear)
    {
        /*
         * STUDENT ANSWER
         */
        this->title = new char[strlen(title) + 1];
        strcpy(this->title, title);

        this->authors = new char[strlen(authors) + 1];
        strcpy(this->authors, authors);
```

```
31
32            this->publishingYear = publishingYear;
33        }
34
35        Book(const Book &book)
36        {
37            /*
38             * STUDENT ANSWER
39             * TODO: deep copy constructor
40             */
41            this->title = new char[strlen(book.title) + 1];
42            strcpy(this->title, book.title);
43
44            this->authors = new char[strlen(book.authors) + 1];
45            strcpy(this->authors, book.authors);
46
47            this->publishingYear = book.publishingYear;
48        }
49
50        void setTitle(const char *title)
51        {
52            /*
```

	Test	Expected	Got

Marks for this submission: 1,00/1,00.

1. In the toy store, all toy has a price. Car toy has a price and color, Puzzle toy has a price and size. We have to implement class CarToy and class PuzzleToy which inherit from class Toy.
2. class ToyBox has a pointer array to store a list of toys (up to 5 items including car and puzzle) and number of items in the box.

Your task is to implement two function addItem(…) in class ToyBox. If successfully added, the function returns the current number of toys in the box. If the box is full, return -1.

For example:

Test	Result
```CarToy car(20000,red);``` ```PuzzleToy puzzle(30000,small);``` ```car.printType();``` ```puzzle.printType();```	```This is a car toy``` ```This is a puzzle toy```
```CarToy car(20000,red);``` ```PuzzleToy puzzle(30000,small);``` ``` ``` ```ToyBox box;``` ```box.addItem(car);``` ```box.addItem(puzzle);``` ```box.printBox();```	```This is a car toy``` ```This is a puzzle toy```
```Toy* toy = new CarToy(30000,red);``` ```toy->printType();```	```This is a car toy```

Answer: (penalty regime: 0 %)
